

Deep analysis phenomenon UFO/UAP

Developed by Mgr. Jaroslav Freedom

From end August 2025 I am building web map project for analysis UFO/UAP phenomenon. The project includes a large dataset containing hundreds of thousands of reports of unidentified anomalous phenomena (UAPs), historically referred to as unidentified flying objects (UFOs).

In the last decades passed study these phenomena epistemological by moving from marginal pseudoscientific fascination to serious academic and the government research, which This is also evidenced by the recent involvement of institutions such as the American AARO (All- domain Anomalies Resolution Office), testimonies of prominent state and military employees of US institutions before Congress, or reports from NASA. ¹ My submitted analytical report is based on my merged database, which synthesizes data from public available global even local resources (including databases NUFORC, GEIPAN and the project Glow), weir to February 2026 contains total 323 729 valid records mapping the period from the beginning of the 20th century to the present. ⁴

The aim of this report is to analyze my research materials (including CSV exports, PDF reports and extensive search records) with the aim of identifying hidden patterns of behavior of the UFO/UAP phenomenon. The analysis broadly covers the development of the phenomenon in time and space, critical connections with military infrastructure and nuclear facilities, the formative influence of pop culture and media discourse on the frequency of reports and, last but not least, deeper psychological aspects, such as the so-called phenomenon of high strangeness (high strangeness) and cognitive impacts on the observer.

1. Structural and statistical profile data bases

That was possible from the huge amount anecdotal also in the instrument substantiated report extract signal from noise, is necessarily first understand structure input give. Mine primary CSV database, which serves like basis for mapping, uses standardized twelve-column architecture. ⁴ Key parameters include precise timestamp (datetime), geographic location with city- level accuracy and the state substantiated geodetic coordinates (latitude/longitude), morphological object classification (shape), quantified time duration phenomenon and unstructured textual field (comments), which contains a narrative description of the event from the point of view of witnesses. ⁴ It is the text notes that are the most valuable from an analytical point of view, as they contain data that can be used for natural language processing (NLP) to identify psychological interactions or anomalous flight properties of observed phenomena.

The automated system of my interactive web map categorized the entire database of over 300,000 records into eleven specific analytical missions (accessible via the IN-DEPTH ANALYSIS button) that reveal the fundamental characteristics of the phenomenon. The following table (on second page) presents selected macro-categories, their quantitative representation, year of highest occurrence and dominant morphology ⁴:

Analytical category (topic report)	Total number of valid records	Year maximum activity	Dominant reported face
Triangles	20,940	2012	Triangle
Quiet flight	12 444	2012	Triangle
Extreme speed	11 881	2012	Light (Light)
Tic Tac Toe / Cigar / Cylinder	11 881	2012	Cigar (Cigar)
Water worlds (nearby) large bodies of water)	9 055	2012	Light (Light)
Aviation observation	8 476	2013	Disk
Military / Radar detection	3 955	1952	Disk
Nuclear footprint (proximity nuclear power plants or military nuclear device)	1 501	1967	Disk
Mass observations	953	1966	Disk
Psychological impact	477	1977	Disk
Trusted witness	422	1952	Light (Light)

The presented statistics reveal a fundamental analytical conclusion: there is a diametrical difference between historical and modern observations. While category connected with origins cold wars, military, radars and nuclear threat show maxima in the 1950s and 1960s and are dominated by the classic "disk" (flying saucer) shape, mass data sets defining the modern era (triangles, quiet flight, Tic Tac Toe shapes and water interaction) culminates uniformly in the year 2012. ⁴ This break shows a strong correlation between data collection methodology, social influences, and the technological capacity of witnesses. Morphological analysis subcategory " Tic Tac ", whose naming became popular after incident aircraft ship USS Nimitz in the year 2004, further decomposes described almost twelve thousand records for 7,724 cigars , 4,071 cylinders and 22 capsules . ⁴ At the same time, this subcategory shows almost symmetrical correlation with daily time (5 859 report at night vs. 5 260 over day), which, from a probabilistic modeling perspective, demonstrates that these objects cannot simply be dismissed as nighttime optical illusions or ordinary atmospheric phenomena. ⁴

2. Space-time development and morphological evolution phenomenon

Time axis phenomenon UAP is not linear; shows cyclical explosion activities, so-called "waves" no pain " flaps ", which with often they agree with technological breakthroughs humanity and locally whose temporally current geopolitical tension. Although anomalous phenomena on sky were recorded already in antiquity and the Middle Ages (where they were interpreted through the prism of the religious and mythological framework of the time as celestial signs whose cars gods), modern era, from which benefits our database, began after second world cylinders. ⁶

2.1 The post-war period and the emergence of the flying saucer narrative (1946–1947)

Immediately after World War II, in 1946, a wave of sightings of so-called " ghost missiles" swept Scandinavia and parts of Eastern Europe. rockets), which were speculated to be captured German V-2 weapons tested by the Soviet Union. ⁸ The real turning point in global perception, however, occurred 24. June 1947, when American private pilot Kenneth Arnold reported formation nine shining ones objects moving with unprecedented at speed (estimated on 1 200 until 1 700 miles for hour) near Mount Rainier , Washington State. ⁹

From an analytical perspective, it is crucial to realize how the morphological category "Disk" came into being. Arnold actually did not describe objects like plates, but stated, that with acted about machines in shape crescent whose bats that moved "like throwing a plate across the water." ¹⁰ The mass media ignored this nuance and coined the term " flying saucer" saucer), which became an instant global phenomenon. This journalistic error subsequently fundamentally polluted data of the following decade, because witnesses, formed expectations, they started in bulk report disc-shaped vessels – phenomenon known in psychosociology such as confirmation bias and social contagion. ¹¹ Just a few weeks after Arnold's observation, an unknown aircraft crashed. object near military bases Roswell in Nový Mexico. Although army initially issued a press release message about insurance flying disk, immediately afterwards her demented with reference on meteorological balloon (later identified like strictly secret project Mogul for detection Soviet nuclear tests). This event laid basis distrust public towards government institutions, that with in data reflects to this day. ³

2.2 The Washington Incident and the Escalation of Military Surveillance (1952)

At cross control tables statistical extremes is apparently, that year 1952 represents absolute peak for categories "Military / Radar" and "Trustworthy" witness".⁴ Data from this period correlate with the event, that is in ufology known like Washingtonian incident (The Washington Flap). During two after to yourself going weekends (12.–29. July 1952) it happened to massive disruption strictly guarded airborne space above the White house and the building Capitol.¹²

This case has exceptional value in the database due to cross-validation. The objects were observed not only visually by civilian pilots and air traffic control tower personnel (who described them as orange-red fireballs or tailless glowing white lights), but most importantly, they were simultaneously tracked by three independent radar systems from Washington National Airport. Airport and Andrews Air Force Base .¹⁴ When F-94 fighters were sent to intercept , radar contacts showed what the database classifies under category "Extreme speed". Dispatcher Harry G. Barnes then stated that "their movements were absolutely radical compared to normal aircraft." Moreover, when the fighters approached, the objects did not simply try to escape, but in one moment they quickly surrounded the attacking formation, which forced shaken pilot ask about permission to fire.¹⁴ This event forced The Central Intelligence Agency (CIA) and the Air Force reviewed the protocols and initiated the infamous Project Blue Book investigation program , and it became a catalyst for concerns that similar reports could overwhelm air defense warning systems and mask an actual Soviet nuclear attack.¹³

2.3 Shift shaped formulas (1980–1990)

With the progress time shows curve shaped evolution gradual retreat disk and increase asymmetric and polygonal shapes. In the 80s. and on beginning 90. flight started database to fulfill report about massive triangles, boomerangs and V-shapes (classified as " chevron " and "triangle" in CSV export).⁴

This change, registered for example in reports from the area Hudson Valley , Korea or later from Phoenix (the so-called Phoenix Lights of 1997), correlates in detail with the records in the provided CSV. The record from October 10, 1985 from Leeds, UK, speaks of three lights that formed the boundary "big, black and absolutely silent vessels in shape triangle".⁴ Other witness in Poughkeepsie , NY, in 1979 reported a chevron -shaped object (arrows/V) whose flat bottom was parallel with the horizon, it glowed bright red and was "completely noiseless" without any visible structural details.⁴ These structures were characterized by slow flight at low altitudes and the ability to become invisible against the night sky - which may have corresponded with the development and testing of American stealth technologies (e.g. B-2 Spirit and F-117 Nighthawk bombers), which were at that time under the strictest secrecy regime. Nevertheless, many witnesses reported feats (e.g. staying in place for hours, absolute absence aerodynamic sound engines and ability immediately unearthly acceleration-race), which do not match the physical capabilities of stealth aircraft .⁴

2.4 Data Explosion in the Era of Smartphones and the Mayan Calendar (2012–2013)

Let's return with to the fact, that subcategory like "Aqueous worlds", "Triangles" and " Tic Tac " culminate with gray hair thousandth report in the year 2012. Explanation this one sharp spade requires connection technological and social metrics. Year 2012 represented milestone in penetration market smart phones with high-quality integrated cameras and ubiquitous mobile connectivity (3G/4G).

Message companies Nielsen from the year 2012 points out, that time spent on social networks over mobile devices grew by an unprecedented 63% year-on-year.¹⁷ Every citizen thus became a potential sensor capable of immediately recording and globally sharing an anomaly.

However, this technological factor intersected with a strong cultural contagion: 2012 was globally connected with anticipation end Mayan calendars (baktun), which in companies caused increased rate anxiety, interest about mysticism apocalyptic predictions, ancient astronauts and heavenly phenomena.¹⁸ Pop culture (for example film *2012* from Roland Emmerich or various pseudohistorical documents connecting Mayan prophecy with an alien by intervention whose circles in grain) massively sensitized the population to keep their eyes on the sky.²⁰ As modern analyses (e.g. the work of anthropologist J.) demonstrate, LaViolette's about "sensory" ecology), people simply sees it, for what are cognitively directed and what allows them to monitor the environment.²² The hypervigilance of 2012 logically led to a huge number of reports of weather balloons, meteors, Chinese lanterns and optical illusions as UAP, thereby originated statistical top, who after fading away apocalyptic mania again slightly decreased (e.g. the recorded drop in reporting between 2012 and 2017).²³

2.5 Modern pollution give: For example influence program Starlink

Predictive data modeling development phenomenon currently facing critical challenge: satellite contamination megaconstellations Starlink companies SpaceX . From year 2019, when Elon Musk started placement thousands satellites on low circulating track Country (LEO), started database to overwhelm news O

"rows of strange lights." During the ascent phase of the orbit, the solar panels of the Starlink satellites reflect solar light in the twilight and dawn hours, which that Country looks like a perfectly aligned "train" of glowing objects.²⁴

Department of Defense (AARO) analytical models and independent researchers demonstrate a direct correlation between the timing of Falcon 9 launches from Cape Canaveral and explosive increases in reports

"UAP formations" from areas below the new orbital trajectory (e.g., increased reports from commercial pilots).²⁶ Extrapolating from the fact that Starlink plans to have tens of thousands of satellites in orbit, it is each future map and predictive algorithm absolute priority integration astronomical ephemeris to cross-filter these optical flashes.²⁷

3. Strategic Patterns: Nuclear Footprint and Ties to Military Installations

The most serious and in terms of national security the most critical by formula identified in the data file is the so-called "Nuclear Footprint." As the PDF extract reveals, this specific category counts 1,501 valid cases, with the highest concentration occurring in 1967.⁴ Incidence correlation UAP with military devices and infrastructure connected with development atomic weapons has its roots at the very dawn of the atomic age.

3.1 Historically surveillance over project Manhattan

Already from the first tests nuclear weapons attracted these locations attention unknown flying facilities. In close proximity to the Hanford plutonium production complex in Washington state, the Oak enrichment plant Ridge in Tennessee and Muroc Airfield (later Edwards AFB), were

unexplained visual contacts were regularly reported after 1947.²⁹ A typical phenomenon from the 1949s and 1950 in the vicinity these bases and in laboratories Los Alamos was occurrence so-called "green fireballs" that showed signs of intelligent control and did not exhibit the ballistic trajectories of ordinary meteorites.²⁹

Villarroel & Bruehl , 2025) provided groundbreaking evidence of this correlation . Researchers analyzed historical astronomical photographic boards from the observatory Palomar taken before the official start of the space age (1949–1957), i.e. from the time when in orbit were not none artificial human satellites.³⁰ On these images identified "transient" "transients " – points resembling mirror reflections that appeared in one image and were no longer in the comparison image. When cross-analysing with databases of ground nuclear tests (American, British and Soviet) authors found out stunning correlation: probability discovery The number of these anomalous lights in the sky increased by a full 45% in the three-day window surrounding the nuclear explosion. The day after the nuclear test, it even increased by 68%.³⁰ Together with the increased occurrence of transients rose in these days and number report from the database UFOCAT (every time report UFO correlated with an 8.5% increase in transients).³¹ Although skeptics suggest that the lights could have been caused by radioactive fallout contaminating photographic boards, authors they argue, that fallout would created diffuse fog, not point, to the stars similarly tracks.³² Research strongly implies possibility, that inhuman intelligence closely monitored how humanity mastered the power of atomic fission.

3.2 Disruption of strategic weapons systems: Malmstrom 1967 and Tehran 1976

The peak of the "Nuclear Footprint" category in 1967 is related to one of the most terrifying incidents of the Cold War. war. 16. March 1967 in the underground commanding officer center "Echo " Flight " on air Lieutenant Robert Salas was stationed at Malmstrom Base in Montana . During his shift, a security guard on the surface reported an object exhibiting strange flight maneuvers, which turned out to be a huge, glowing red object hovering silently directly above the main gate of the complex.³³ Practically immediately after this visual report with on control console launched alarms and fully operational ten Minuteman III intercontinental ballistic missiles , carrying nuclear warheads, went into "No-Go" mode one by one.³³ The missiles lost their strategic alert status at the same time. Although military reports later cited commercial power outages or testing of an electromagnetic pulse (EMP) weapon as explanations, eyewitnesses insist that the systems were shut down from the outside anomalous by force.³³ If would similar capacity on weaning arsenal had Soviet union, represented would it total asymmetry can. Similarly incidents with also appeared in the British forest Rendlesham in the year 1980 nearby American air bases RAF Woodbridge , where strategic infrastructure was also deployed.²⁹

A decade later, on the night of September 18–19, 1976, an event occurred over Tehran, Iran, demonstrating the UAP's ability to selectively manipulate weapons and avionics systems in the air.³⁵ After numerous visual reports of a bright object over the Iranian capital, the then Imperial Air Force dispatched two top-of-the-line American F-4 Phantom II aircraft to intercept it. The commander of the second aircraft, Major Parviz Jafari , detected a target the size of a Boeing KC-135 on radar flying distances roughly 27 maritime million Visually went about the object pulsating intensive red, green, orange and blue light.³⁵ The moment Jafari initiated the weapons protocol to launch the infrared-guided AIM-9 Sidewinder air-to-air missile , complete control panel weapons, radio and all electronics in the cockpit impact "went out".³⁵ Functionality devices with returned to normal only when the aircraft aborted the attack and changed direction away from the target. The object subsequently

, rocket-like secondary module toward Jafari and sent another one to a soft landing on Earth's surface.³⁵ Records of similar disruption of civilian technology are also offered by the analyzed CSV document: in Michigan (West Bloomfield , October 10, 1972) the disc-shaped aircraft caused the current in the car battery to drop to zero, turning off the engine, lights, and radio of the vehicle.⁴

3.3 Combat meeting in Czechoslovakia: Vranov 1987

Incident with high military engagement with did not avoid or medium Europe. On 12. July 1987 over Vranovská dam on south Moravia played event, to which intervened 51. helicopter regiment and after the sets fighter airplanes Czechoslovakian folk army.³⁶ Black subject in shape cigar originally captured radar stations arriving from Austria was visually confirmed crew offensive Mi-24 helicopter . The pilots were given a sharp order from the ground command to shoot down the target. However, as soon as the gunners locked on the object to of their own sights, target carried out evasive maneuver, who denied physical laws inertia and aerodynamics that one times. Additionally incident was taking place for daily lights direct over crowded dam full of vacationers, which made it impossible launch onboard weapons.³⁶ Subsequently were to prosecution involved current airplanes L-39 Albatross from Brno AIRPORT. You vessel were chasing until to nuclear power plant Dukovany and subsequently on Slovakia, until target did not disappear unimaginable speed, what then airplanes Starfighter or Aardvark type could not have developed, without the need for any refueling for a period of longer than two hours.³⁶

It is necessary to objectively mention that the constant association of UAP with the military may be partly a product of "data collection bias" (bias).²⁹ As former AARO Director Sean Kirkpatrick and environmental Bayesian models show, military areas have the highest quality multispectral radars, trained airmen and constant vigilance.²⁹ Increases with here therefore the basal chance of intercepting anything. On the other hand, specific, intelligent targeting and manipulation of weapons, as shown by examples from both the US and Iran, go beyond mere statistical variation.

4. Phenomenology and Physical Manifestations: Five Observable Characteristics

Due to the huge amount of meaningless "noise" in the databases (birds, planes, balloons, reflections) created news reporters specialists (e.g. former program AATIP at to the ministry defense USA, led by Luis Elizondo) the methodological framework of the so-called Five Observable Characteristics (The Five Observables), by which with anomalous UAP absolutely distinguish from human technology.⁴⁰ If an object reliably exhibits a combination of these five features, atmospheric phenomena and terrestrial flight technology can be ruled out:

1. **Sudden / Instantaneous acceleration Acceleration):** The ability of an object to reach a speed of Mach 10 or more from rest in a fraction of a second, or the ability immediately alter direction flight to true angle, which would destroyed any known material due to gigantic overload (G- force).
2. **Hypersonic speed without thermal and acoustic speeches (Hypersonic Velocity without Signatures):** Movement of objects many times faster than sound (Mach 5+), but without creating a sonic boom and without producing the gigantic frictional heat that burns meteors also military warhead. Record from our CSV database (Lackland AFB, 1949) it perfectly

illustrates: "lights flying across the sky and turning 90 degrees on a dime" and "moving at unearthly speed in the blink of an eye" (Penarth , UK 1965). ⁴

3. **Positive Lift without obvious aerodynamic surfaces (Positive Lift without Flight Surfaces)**: UAPs can hover in the air for hours without the use of lift wings, rotors, or vertical exhaust nozzles to create reaction mass.
4. **Transmedia travel (Trans-Medium Travel)**: Ability object without fluent slowing and deforming to pass from the vacuum of space into Earth's atmosphere and immediately sinking deep below the water surface (which explains the large "Water Worlds" category in our analysis of 9,055 records). ⁴
5. **Low observability and system interference (Low Observability)**: Objects often emit signals in a wider electromagnetic spectrum or manipulate radars to provide a blurred or false image, as Nimitz " Tic-Tac " did to the F/A-18F Super Hornet fighter . ⁴⁰

Moreover, recent models propose supplementing these parameters with specific manifestations that theoretically show on use asymmetrical warp drive (Alcubierre formerly). As states studies (Wanless & Palachik , 2025), analysis of UAP images identified a "gravitational lensing " effect . lensing), when curvature space-time bends light stars for by boat, and clear inclinations vessels "disk-shaped" at a certain angle to the motion vector, accompanied by optical blurring due to the frequency of the space-time oscillation. ⁴³ If a bubble of separate space-time envelops the ship, there is no friction, resistance, sound bang and crew does not feel none inertial forces, which it mathematically solves all kinetic anomalies recorded in historical tables.

5. Deeper Unknown Aspects: Psychological Influences and the "Oz Factor"

Reducing the UAP phenomenon to just a physical-technical nut grossly neglects the most disturbing part of the whole issue – the interaction with human consciousness and perception, often referred to in ufology as like phenomena "high" "strangeness" (High Strangeness). Categories "Psychological "impact" was validated over 477 specific records. ⁴ These folders they exceed materialistic descriptions and exhibit characteristics approaching paranormal experiences.

Basic by sign this phenomenology is concept known like " **Oz" factor**" (The Oz Factor), term, who defined British ufologist Jenny Randles . ⁴⁵ This factor describes deep the sensory isolation that the witness feels immediately before and during a close encounter (Close Encounter). Witnesses indicate feelings suddenly derealization, when world around them will lose colors (grays out), surrounding environment – like animals, transport and noise nature – will fall silent to absolute unnatural silence and man he feels a kind of stretching of time or being drawn into a parallel reality from which other people have disappeared. ⁴⁵

Traces of such psychological manipulation can be directly deduced from the supplied data sample (CSV). The record from the city of Live Oak (Florida) dated October 10, 1966 is absolutely crucial. Here, the pregnant mother of the witness she testified, that during tracking disk sucking energy from electric knowledge accepted

"mental signals" (mental imperative / telepathy), which her ordered, that did not forward the information further. ⁴ Cognitive impairment can also be observed in records of proactive targeting of objects at humans – a witness from Hudson, Kansas (1974) reported with obvious anxiety that "the light was chasing them" (chased us), and witness from Manchester, New Hampshire (1980), felt clear visual contact,

when the luminous sphere "stopped and watched me." ⁴ From similar incidents, participants often take away a feeling of disruption of the passage of time ("missing time"), temporary paralysis or nightmares, which is psychologically strongly intertwined with sleep paralysis and dissociative disorders caused by extreme trauma from an event that disrupts ontological certainty. ⁷

Extensively studies human perception however they warn before too fast by blaming victims that schizophrenia or delusions. Most witnesses do not show signs of gross psychopathology. ⁵⁰ Psychological profiling shows, that to report incredible are predisposed individuals with personality feature "openness" towards experiences" (Big Five : openness and people with a richer one imaginative life. That of them does not do liar; rather it suggests, that human with smaller cognitive rigidity easier will accept visual anomaly, while human strongly anchored in status what brain subconsciously force such ignore or delete the event. ⁵⁰ However, phenomena of "high strangeness" raise questions about the extent to which UAPs are physical vessels and the extent to which they may be plasmatic or cognitive entities exploring the limitations of human consciousness.

6. Correlation with pop culture, science fiction movies and the media

Perception anomalous phenomena does not stand outside cultural vacuum; is on the contrary critic shaped media space. Data analysis, specifically cross-comparison between the timeline of sci-fi film/television releases series and databases report (so-called "Will" Smith Effect"), clearly they reveal, that pop culture shapes both the volume of reports and their terminology. ⁵²

When in the year 1977 arrived to cinema cinematic hit Steven Spielberg *Close meeting third kind* (*Close Encounters of the Third Kind*), accompanied by film *Star Wars* , followed in the year 1978 absolute an all-time high for British UFO reports, rising from the standard two hundred to 750 recorded incidents. ⁵² The same statistical explosion occurred in the middle nineties flight. While year 1995 read 117 report, in the year 1996, after phenomenal success movies *Day independence* (with Will Smith in the main role) and premieres series *Files X* (*The X-Files*), fired number notification at the British Ministry of Defense at an incredible 609. ⁵² This strong correlation continued the very next year (1997) with the film *Men in black* (*Men in Black*) with 425 reports. ⁵² Increases with they will give demonstrate even in times previous – for example start serial phenomenon *Doctor Who* or influence series and movies *Star Trek* . ⁵²

Proponents of **the psychosocial hypothesis (PSH)** , promoted by Bertrand Méheust and Jacques Vallée (in its early stages), use this data to justify the idea that the UFO phenomenon is actually the embodiment of subconscious mythical needs of man in the modern, over-technified era, some kind of by mirroring deep stress and fear (e.g. from nuclear conflict or losses human innocence). ⁵⁴ Moreover, pop culture has provided eyewitnesses with a shared typology: the iconic image of the petty, gray beings with huge black with eyes ("The Grays") is not historically stable, but fully crystallized after the massive media coverage of the kidnapping of Betty and Barney Hill in the 1960s and was further visually fixed by Hollywood. ⁵⁵

Although above described influence shows on high risk falsely positive cases (misidentification meteors, aircraft, clouds), when media consumption will release barriers to report any unknown light in the night sky ⁵³ , it cannot explain multicontinental radar tracking, trace physical projections into radiation, or reports from experienced naval pilots (*Nimitz incident*). Rather, it confirms the necessity of applying advanced filters to any data system that would "cut off" the noise generated during times of media panics.

7. Geographic hotspots and environmental filters

The spatial distribution analyses recorded in the maps not only show that the phenomena occur across the board, but also that reports emerge in areas with certain specific demographic and environmental conditions. A thorough spatio-temporal study processing 98 000 data points for territory USA between flights 2001 and 2020 for use sophisticated Bayesian regression analyses (including algorithm INLA – Integrated Nested Laplacian Approximation was able to separate the physical factors of the environment from the occurrence of anomalies themselves.³⁹

Researchers identified that the geographic frequency of UAP reporting primarily depends on the "outlook potential on the sky" (Sky View Potential). Regressive mathematically model absolutely without doubts demonstrated correlations between observations and light smog: with each standard deviation increase in light pollution (Mean Light Pollution fell rate report by 7.7 % with 100% statistical credibility).³⁹ Afforestation crowns trees (tree canopy had same negative influence (94% credibility).³⁹ These results refutes concern that signal totally drowned in the noise nonsense and they prove, that people they physically react to phenomena taking place in the real, clearly observable night sky and are therefore not just fabrications from behind a monitor.

On second side strong positive correlation (around 100 %) exists between occurrence report and "potential " for existence objects", which in the model meant distance from military territory (Percent Military Area) and corridors civilian air transport (Air Traffic / Sq . Km.³⁹ Most witnesses therefore realistically sees tested military prototypes and poorly recognized conventional aircraft with navigation lights. Identifying these environmental covariances allows database creators to accurately filter out locations that where is probability visual congestion extreme (AIRPORT), and explore just you anomalies that exceed these normal Earth vectors.

Conclusion

The phenomenon of unidentified aerial objects (and not only aerial objects, see USO – Unidentified Submerged Objects) anomalies represents much more than just cluster isolated conspiracy narratives. Here superior spatial, temporal and semantic analysis rising from the database more than 323 thousand reports have demonstrated statistically valid and robust patterns of behavior that defy explanations in the form of mere mass errors and atmospheric phenomena. Completely unprecedented is the clear historical conformity occurrences anomalies with development human military and nuclear strategy (from complexes at the Manhattan Project, through the Malmstrom base to Tehran and the ČSLA incidents in Vranov or the famous Nimitz incident), which opens up fundamental questions from the perspective of the security and defense policy of sovereign states.

Morphological evolution from the classic flying disc, strongly driven by social expectations and pop culture boom science fiction movies, with today transferred to asymmetric phenomena type " Tic Tac " and hyper-accelerating objects leaving traces fluent transmedia displacement and influence on human perception through the so-called "Oz factor" and related mental phenomena.

GRAND RESEARCH REPORT

28. 2. 2026

UAP ANALYSIS: ANALYSIS: WATER WORLDS (USO)

Generated by UAP Interactive Map

AI Insight

Filtered for USO (Unidentified Submerged Objects) and sightings over bodies of water.

Note: Map will reset after closing this report.

This document presents an automated analysis of Unidentified Anomalous Phenomena (UAP) sightings for **Analysis: Water Worlds (USO)** within the timeframe of **1901 to 2026**. A total of **29917** valid reports were recorded in this area and period.

A significant point in the timeline is the year **2012**, which saw the highest concentration of reports (1698 cases).

Regarding object morphology, the following shapes are predominant:

- **LIGHT** (3945x)
- **DISC** (1909x)
- **TRIANGLE** (1777x)

Time of day analysis indicates that **19423** sightings occurred at night (19:00–05:59), while **6471** cases were reported during the day. For **4023** cases, the time is not precisely determined.
